1.0 DISCLAIMER

This manual is provided on an “as is” basis without warranty, covenant or representative of any kind, express or implied, including the warranties of merchantability or fitness for a particular purpose. Mission Solar Energy uses its best efforts to ensure the accuracy of the contents of this manual; however, Mission Solar Energy is not responsible for the accuracy of said contents or results of your use of the same. Under no circumstances will Mission Solar Energy be liable to you or any third party for damages arising under any legal theory including contract, tort, negligence or strict liability or for direct, indirect, special, consequential; or punitive damages of any kind, including lost profits. Mission Solar Energy reserves the right to make changes without further notice to this manual and to any modules. Mission Solar Energy does not convey any license under its intellectual property rights. Mission Solar Energy assumes no responsibility for any infringement to patents or other rights of third parties that may result from use of this manual or related module.

2.0 HANDLING AND USE

Mission Solar Energy shall not be liable for, and buyer shall indemnify, defend and hold harmless Mission Solar Energy, its affiliates and their respective officers, directors, employees, representatives and agents (“indemnities”) from and against, any and all claims, losses, liabilities, costs and expenses (including attorneys' fees) (“claims”) arising out of or resulting from the handling, use, processing, alteration, distributions, sale or marketing of modules and this manual, or any other action or inaction with regard to the modules and this manual, in each case after the delivery thereof to buyer; provided however, that buyer shall not be liable to Mission Solar Energy for damages directly caused by the sole negligence of Mission Solar Energy. Buyer’s obligations under this section shall survive the termination, cancellations or expiration of all orders delivered under these terms and the cessation of any business transaction between Mission Solar Energy and buyer.

3.0 LIMITATION OF LIABILITY AND LIMITED REMEDIES

In no event will Mission Solar Energy be liable to buyer for any lost or prospective profits, indirect, incidental, consequential, special, exemplary or punitive damages, including, without limitation, lost earnings, or business interruption, whether or not based upon Mission Solar Energy’s negligence, breach of warranty, strict liability, in tort or any other cause of action. Buyer’s exclusive remedy VIS-À-VIS Mission Solar Energy or any other cause if action related to the modules and this manual is at Mission Solar Energy’s option limited to (i) replacement of the non-conforming modules; or (ii) refund to buyer of the portion of the purchase of the purchase price attributable to such non-conforming modules. In no event shall Mission Solar Energy’s cumulative liability exceed the price of modules sold which was the direct cause of the alleged loss, damage or injury.

4.0 GENERAL INSTRUCTIONS

This manual provides important safety instructions regarding installation, maintenance and handling of Mission Solar Energy photovoltaic modules. All the users should read this manual carefully and follow the instructions strictly. The installation of solar modules requires specialized skills and experience and should only be performed by licensed professionals.

5.0 SAFETY

WARNING

5.1 GENERAL WARNING

You must understand and follow all applicable local, state and federal regulations in addition to standards for building construction, electrical design, fire and safety. Check with local authorities to determine applicable permitting requirements before attempting to install or maintain PV modules.

- Module interconnects pass direct current (DC) when exposed to sunlight or other light sources.
- Contact with electrically active parts of the module, such as terminals, can result in injury or death, whether the module is connected or disconnected.
- Never wear metallic rings, watch bands, ear, nose or lip rings or other metallic devices when installing or trouble shooting a photovoltaic system.

5.2 MECHANICAL

- Rooftop PV systems should only be installed on dwellings that have been formally analyzed for structural integrity, and confirmed to be capable of handling the additional weighted load of PV system components including PV modules by a certified building specialist or engineer. For your safety, do not attempt to work on a rooftop until safety precautions have been identified and taken, including without limitation fall protection measures, ladders or stairways, and personal protective equipment (PPE).
- For your safety, do not install or handle PV modules under adverse conditions, including and without limitation - strong or gusty winds and wet or frosted roof surfaces.
- The flat-plate PV module construction consists of a laminated assembly of solar cells encapsulated within an insulating material with a rigid glass surface and an insulated substrate. The laminated assembly is supported by an aluminum frame that is also used for mounting the module.

5.3 ELECTRICAL SHOCK HAZARD

- PV modules can produce current and voltage when exposed to light of any intensity. Electrical current increases with higher light intensity.
- DC voltage of 30 Volts or higher is potentially lethal. Contacting the live circuitry of a PV system operating under light can result in lethal electric shock.
- Use insulated tools and do not wear metallic jewelry while working with PV modules.
In order to avoid arcing and electrical shock, do not disconnect electrical connections under load.
- Faulty connections can also result in arcing and electrical shock.

- Keep connectors dry and clean; ensure that they are in proper working condition.
- Never insert metallic objects into the connectors, or modify them in any way in order to secure an electrical connection.
- Do not touch or handle PV modules with broken glass, separated frames or a damaged back sheet unless the PV modules are first disconnected and you are wearing proper PPE.
- Avoid handling PV modules when they are wet unless cleaning the PV modules as directed in this manual. **See 12.2 Cleaning.**
- Never touch electrical connections that are wet without protecting yourself with insulated gloves. Artificially concentrated light should not be directed on the module or panel.

5.4 FIRE

- Mission Solar Energy modules have a Type 1, Class C fire resistance rating in accordance with the IEC 61730 and UL 1703 standard.
- The fire rating of this module is valid only when mounted in the manner specified in the mechanical mounting instructions. See 9.0 Mechanical Installation
- PV modules are electricity generating devices that may affect the fire safety of a building.
- The use of improper installation methods and/or defective parts may result in the unexpected occurrence of an electrical arc during operation.
- The recommended standoff height is no less than 150mm (6 inches). If other mounting means are employed this may affect the fire class ratings. A minimum slope of 5in/ft. for installation over a roof is required to maintain the class C fire rating. Modules must be mounted over a fire resistant roof covering rated for the application.
- In order to mitigate the risk of fire in this event, PV modules should not be installed near flammable liquids, gases and/or locations with hazardous materials.
- In the event of a fire, PV modules may continue to produce a dangerous voltage, even if they have been disconnected from the inverter, have been partly or entirely destroyed, or the system wiring has been compromised or destroyed.
- In the event of fire, inform the fire crew about the particular hazards from the PV system, and stay away from all elements of the PV system during and after a fire until the necessary steps have been taken to make the PV system safe.

REVISION:[R14] 7/14/2020

RELEASE DATE: 11/16/2016

6.0 OPERATING CONDITIONS

6.1 TEMPERATURE

All the modules must be mounted in environments that ensure they operate within the following maximum and minimum operating temperatures.

- Maximum Operating Temperatures: +90°C (194°F)
- Minimum Operating Temperatures: -40°C (-40°F)

6.2 INSTALLATION CONDITION

Orient the module correctly. Mount the modules with the junction box in the uppermost position and hang the wires downwards to avoid the ingress of water. For optimal module performance install PV modules facing true south in northern latitudes and true north in southern latitudes. Shading will reduce electrical production. This installation is applicable when the module is in portrait orientation. The modules have been evaluated by UL standards for mounting using the recommended mounting positions.

Always wear Proper PPE when handling MSE Panels

7.0 UNPACKING & STORAGE

7.1 GENERAL INSTRUCTIONS

Store modules in an environment consistent with prudent solar industry practices, including, storage in dry conditions such that modules (or any part thereof) are not immersed in water.

Do not carry the module above the head.

Do not allow children or unauthorized persons near the installation site or storage area of modules.

Do not drop or place objects such as tools on the modules.

Do not use forklifts with less than 72 inch forks to handle module pallet.

Do not mark the modules with sharp instruments.

Unpack the module pallet with care and follow the unpacking steps in this manual. Be careful when unpacking, transporting and storing the modules.

Particular attention should be taken to avoid module back sheet contact with sharp objects. Scratches may directly affect product safety.

Do not carry a module by its wires or junction box. At least two or more people are recommended to carry the module for safe handling.

Do not leave a module unsupported or unsecured.

Do not place modules directly on top of each other and prevent modules from touching one another.

Do not change the wiring of bypass diodes.

Do not place excessive loads on the module or twist the module frame.

Keep all electrical contacts clean and dry.

Do not stand, step, walk and/or jump on the module.

Modules may have sharp frame corners, use of puncture and cut-resistant gloves is recommended.

7.2 UNPACKING INSTRUCTIONS

Always wear Proper PPE when handling MSE Panels

Prior to unpacking, ensure pallet is set on a level surface and proper PPE is equipped by all personnel. Proper PPE for unpacking includes but is not limited to eye protection, cut-resistant gloves and steel-toe footwear.

Cut the two green strips of banding material with scissors. These strips are under high tension and will snap when cut. Eye protection is highly recommended.

Lift the pallet lid and set away from unpacking area.

Using a box cutter, carefully cut along the corner from the top to the middle of the box on the packing slip side. Ensure the blade stays on the outside and does not cut through the white corner protectors.

After both corners have been cut, fold the lengthwise side of the box halfway down allowing easy access to the modules. Cut the internal banding material as well being careful to avoid contact with the modules.

Peel back sides of box to allow additional access to modules.

(Optional) Apply no-residue tape across the plastic corner clips to provide additional support to stack as modules are removed.

(Optional) Tape must reach at least 6 inches down on opposite side of box to maintain hold.

Remove white corner protectors.

COPYRIGHT 2020 MISSION SOLAR ENERGY LLC, ALL RIGHTS RESERVED

Always wear Proper PPE when handling MSE Panels

(Optional) If tape has been used to provide additional support to module stack, peel tape back as needed to remove individual modules.

The first module must be separated and pulled out with additional care so as to not scratch the modules. Continue removing modules by peeling back tape, moving the module forward and pulling it up.

When four modules remain, the stack will inherently become prone to tipping over. At this point, ensure two personnel are available to secure the stack.

Slide the remaining modules to the front of the box.

Carefully lower modules down to a horizontal position with the glass side down.

Remove box sleeve allowing easy access to remaining modules from the horizontal stack.

REVISION:[R14] 7/14/2020

RELEASE DATE: 11/16/2016

8.0 PRODUCT SPECIFICATION

PV Modules have been certified to IEC 61215 for a maximum static load on the back of the module of up to 2400 Pa (i.e. wind load) and a maximum static load on the front of the module of up to either 2400 Pa or 5400 Pa (i.e. wind and snow load). For UL 1703 only, PV modules are tested to a front side and rear side applied load based on 78 psf design load. The performance of solar modules is defined on the uniform standard test conditions. These conditions define performance at an incident sunlight of 1000 W/m², a cell temperature of 25°C (77°F) and an AM of 1.5 (AM = Air Mass). The air mass determines the radiation impact and the spectral combination of the light arriving on the earth's surface.

9.0 MECHANICAL INSTALLATION

The module is considered to be in compliance with UL 1703 only when the module is mounted in the manner specified by the mounting options below. Per UL standards, the maximum number of modules connected in series/parallel for 60-cell module is 19/1, for 72-cell module with maximum system voltage of 1000V is 16/1 and 72-cell module with maximum system voltage of 1500V is 24/1. However, please refer to your local Authority Having Jurisdiction (AHJ) as well as best installation practices for the maximum number of modules that can be installed in series and in parallel for your specific installation project site and application.

9.1 MOUNTING OPTIONS

Make sure that the module is evenly between the two rails and sits perpendicular on the railing. If the module is not perpendicular, slightly adjust the clamp positions to get the proper alignment.

**Mounting Distance [D] – distance between edge of module and middle of clamp location. This is assuming that modules are mounted on a certified railing system.*

For Bolt fitting, Module shall be bolted to support structures through four mounting holes using M7*16mm (or ¼”*16mm) bolts together with flat washer, spring washer and nut. The applied torque should be 16±2 Nm. For Clamp fitting, once the module is aligned and centered, fully tighten the screws in the end-clamps in place to 16±2 Nm. All the end clamps should be torqued to this value.

Note: Allowable clamp minimum dimensions are as follows:

DIMENSION	mm	in
A	9.2	0.36
B	38	1.5

10.0 GROUNDING INSTRUCTIONS

A module with exposed conductive parts is considered to be in compliance with UL 1703 and IEC 61730 only when it is electrically grounded in accordance with the instructions presented below and the requirements of the National Electric Code. To reduce the possibility of electrical shock, ground the frame of the module or array before wiring the circuit using a grounding method that meets NEC requirements for grounding solar electrical systems. In order to install, Mission Solar Energy modules shall be grounded using grounding hardware that has been certified to meet requirements for grounding systems in UL467, UL1703 or UL1741 on anodized aluminum frames. Mission Solar Energy recommends one of the following methods of grounding the module frame. The attachment must be made in conformance with the grounding device manufacturer's instructions and be used with a racking system in compliance with UL Outline (Standard) 2703 where this module has been evaluated with that racking system.

10.1 WEEB-UIR

The WEEB washer family of products can be used to bond anodized aluminum, galvanized steel, steel and other electrically conductive metal structures. All installations shall be in accordance with NEC requirements in the USA and with CSA C22.1 in Canada. The WEEB washers are for use with modules that have a maximum fuse rating of less than 25A. Use WEEB-UIR to bond solar modules to module mounting purlin and torque fasteners to 7ft-lb / 9.5N-m use Penetrox-A on threads. The following UL Recognized component, Bonding Washer, manufactured by BURNDY LLC (E351343) in combination with the following model number PV module(s), used with a flat washer (optional), a M5 size nut and bolt (see Figure 3 for details).

REVISION:[R14] 7/14/2020

RELEASE DATE: 11/16/2016

11.0 ELECTRICAL INSTALLATION

11.1 LOCAL / NATIONAL CODE AND LOCAL REGULATION

To carry out installation, local regulations that may apply should be taken into account such as NEC (USA) or Canadian Electrical Code (Canada). Wiring should be performed by a qualified and licensed professional. Wiring should be protected to help ensure personal safety and to prevent damage. All modules connected in series should be of same model number and/or same type. Do not connect modules in parallel without using a combiner box or equivalent.

Under normal conditions, a photovoltaic module is likely to experience conditions that produce current and/or voltage other than reported at standard test conditions. The requirements of the National Electric Code (NEC) in Article 690 shall be followed to address these increased outputs. In installations not under the requirements of the NEC, the values of ISC and VOC marked on this module should be multiplied by a factor of 1.25 when determining component voltage ratings, conductor capacities, over current device ratings and the size of controls connected to the PV output.

11.2 WIRING

Mission Solar PV modules come with a factory assembled Junction Box. Do not open the junction box in any case. Wiring must be done in accordance with local/national code and regulations; wear protective gloves and shoes to avoid electric shock. Address the following recommendations:

- The modules combined in parallel will produce a specific current output. Each series string or module is required to be fused. Table 1 describes the maximum fuse size allowed.
- Do not connect the modules if the connectors are wet.
- Be sure to put the cables away from sharp edges.

- If you need additional cables you must use exclusively solar cable of 12AWG/4mm² minimum cross-sections, with ability to work in a temperature range of at least -40°C and 90°C.
- Install the modules so that water from rain or condensation cannot penetrate inside the cable conduits.
- Fix cables to the structure so that the connectors are protected from water ingress. Cables should be held by UV resistant clamps or ties.
- To minimize possible effects of lightning induced voltages, the surface of all conductive loops must be as small as possible.
- Check that the wiring is correct before starting the installation by verifying that the open voltage is within expected values.
- Protect cables that could suffer mechanical damage.
- Avoid direct sunlight on cables.
- Maximum series fuse rating 20A.
- Details for wiring in accordance with the NEC, and that the grounding method of the frame of arrays shall comply with the NEC, article 250.
- Installation shall be in accordance with CSA C22.1, Safety Standard for Electrical Installations, Canadian Electrical Code and Part 1.
- Modules may be connected in series (voltage additive) and/or in parallel (current additive) to produce the appropriate electrical output. When connecting modules in parallel, each module (or series string of modules so connected) shall be connected according to the maximum series fuse as specified.
- Recommended series connection of module open circuit voltage should not exceed 80% limits range of the system voltage and the fuse should be connected at the end of each array.
- The installation instructions specify that grounding is achieved through securement to the array frame. The array frame must be grounded in accordance with NEC Article 250.

11.3 CONNECTORS

- Keep connectors dry and clean. Ensure that connector caps are hand-tight before connecting the modules.
- Do not attempt to make an electrical connection with wet, soiled, or otherwise faulty connectors.
- Avoid sunlight exposure and water immersion of the connectors. Avoid allowing connectors to rest on the ground.
- Ensure cable connectors are UL and Canadian code complaint.
- Faulty connections can result in arcs and electrical shock.
- Check that all electrical connections are securely fastened.
- Make sure that all locking connectors are fully engaged and locked.

CONNECTOR MODEL NAME	ALLOWABLE MATING CONNECTOR MODEL NAME	MANUFACTURER

11.4 DIODES

- The junction boxes used with Mission Solar Energy modules contain bypass diodes wired in parallel with the PV cell strings.
- In the case of partial shading, the diodes bypass the current generated by the non-shaded cells, thereby limiting modules heating and performance losses. Bypass diodes are not over-current protection devices.
- Bypass diodes divert current from the cell strings in the event of partial shading. In the event of a known or suspected diode failure, installers or maintenance providers should contact Mission Solar Energy.
- Never attempt to open the junction box.

12.0 MAINTENANCE

12.1 VISUAL INSPECTION

Mission Solar Energy recommends that PV systems be periodically inspected by the installer or other qualified personnel. The purpose of the PV system inspection is to ensure that all system components are functioning properly. At a minimum, this inspection should confirm the following:

- All cables and connector attachments are undamaged and properly secured.
- No sharp objects are in contact with the PV module surfaces.
- PV modules are not shaded by unwanted obstacles and/or foreign material.
- Mounting and grounding components are tightly secured with no corrosion.
- Defects should be addressed immediately.

12.2 CLEANING

- The dust accumulated on the front transparent substrate may reduce the power output, and may even cause regional hot-spot effect.
- It's usually not dangerous for the accumulated dust to reduce the sunshine because the light intensity is still homogeneous and power reduction is not usually obvious.
- When modules are installed, avoid environmental influence factors that cast shadows and cover part or all of the modules. This includes other modules, system support, bird drops, dust, and so on. This debris may distinctly reduce the power output.
- The cleaning frequency depends on the accumulation frequency and can vary from 6 months to 2 years. Do not use alkaline, abrasive, alkali or acid materials, detergents, or cleaning solutions to clean the module.
- It is recommended to wipe the glass surface with a wet sponge or soft cloth. Please do not clean the glass with a cleaning agent which contains acid or alkali.

REVISION:[R14] 7/14/2020

RELEASE DATE: 11/16/2016

13.0 REVISION HISTORY

REV	ORIGINATOR/DC INITIALS	DOCUMENT CONTROL	DESCRIPTION OF & REASON FOR CHANGE(S)	RELEASE DATE
0	Avanija Vedala	Sarah Cruz	Initial release of document control procedure	11/14/2016
R1	Avanija Vedala	Joy Watson	Minor revisions were made to format and manual by Document owner.	01/12/2017
R2	Avanija Vedala	Joy Watson	Minor revisions; Page 5 Fire rating changed from type 2 to type 1	1/18/2017
R3	SJ Tark	Joy Watson	Minor revisions; Page 6 changed unpacking instruction	3/21/2017
R4	SJ Tark	Joy Watson	Added paragraph 3 in 10.0 Grounding Instructions	6/19/2017
R5	Aaron Arriaga	Joy Watson	Updated 1 st bullet under Sec.7: "Storage of modules in an environment consistent with prudent solar industry practices, including, by way of example, storage in dry conditions such that modules (or any part thereof) are not immersed in water."	12/13/2017
R6	James Whittemore	Joy Watson	Changed wordings on 8.0: applied / test Load	2/7/2018
R7	John Seo	Joy Watson	Added electrical specs for 5BB modules: Tables 5-8; updated 9.0: Figures 3 & 4 images and added Table 5 to define above figures. Added	8/22/2018
R8	Ana Morales	Joy Watson	Updated unpacking instructions with most recent photos; New design and format	1/10/2019
R9	John Seo	Joy Watson	Minor revision: changed wordings on 9.0, 9.1, 10.0 and 10.1 Updated connectors in 11.3	5/2/2019
R10	John Seo Andrew Flores	Joy Watson	Added the following to 8.0 under 5BB series 385SQ9S, 385SQ7S, 315SQ8T, 320SQ8T, 320SQ8K, 325SQ8K Updated connectors of JM608 in 11.3 Revised 10.0 Mechanical Installation - 6/12/2019 CHANGED: Maximum number of modules connected in series /parallel for 60-cell module is 19/1, for 72-cell module with maximum system voltage of 1000V is 16/1 and 72-cell module with maximum system voltage of 1500V is 24/1. TO: Please refer to your local Authority Having Jurisdiction (AHJ) as well as best installation practices for the maximum number of modules that can be installed in series and in parallel.	5/3/2019
R11	John Seo	Joy Watson	Added electrical specs for SR9S, SR7S, SR8T and SR8K to Table1, Table2 Added drawings for SR9S, SR7S, SR8T and SR8K to 10.1	8/1/2019
R12	John Seo	Joy Watson	Revised 9.0 Mechanical Installation. The module is considered to be in compliance with and UL 1703 only when the module is mounted in the manner specified by the mounting instructions options below. Removed the following under Bolt Fitting statement: Ensure that the channel nuts do not extend outside of the purlin. Drop the clamp into the purlin. Place the channel nut inside purlin and place the grounding clip between the module and purlin with the grounding clip tabs in the middle of the purlin. Install the final two end-clamps once the final module has been placed. Similar to the End-Clamp section, place an end-clamp on each purlin, flush to the final module with the lip of the end-clamps on top of the module. Fully tighten the end - clamps once they are properly placed. If the channel nuts extend outside of the purlin, spacing has been done improperly and needs to be fixed. Changed subtitle and content on 9.1 Mounting Clamps from: Use the mounting holes as a reference - 297mm (MSE 60 SQ8T/SQ8K Series), 300mm (MSE 60 SR8T/SR8K Series), 370mm (for MSE 72 SQ9S/SQ7S/SO9J/SO7J Series) or 373mm (for MSE 72 SR9S/SR7S Series) for mounting clamp location. Make sure that the module is evenly between the two rails and sits perpendicular on the railing. If the module is not perpendicular, slightly adjust the end-clamp positions to get the proper alignment. to: 9.1 Mounting Options Make sure that the module is evenly between the two rails and sits perpendicular on the railing. If the module is not perpendicular, slightly adjust the clamp positions to get the proper alignment. Updated Table 5 to reflect UL approved mech. load Corrected typo errors in Tables: 1,2,3 & 4 Electrical Ratings (~ to % sign)	3/16/2020
R13	John Seo	Joy Watson	Minor change: corrected SQ9S drawing on page 13 - grounding hole marking got shifted during file type conversion.	4/28/2020
R14	John Seo	Joy Watson	Added below to Table 5: SNOW & WIND LOAD AS SPECIFIED BY UL1703 under "Clamps" on page 12: Mounting Distance: 0.178L - 0.225L Front Design Load 2400 Back Design load Pa 1600 Pa	7/14/2020
